About Me

My journey into web development started as a hobby during my time at Network Computer Engineering Vocational High School. After graduating, I turned my hobby into a serious pursuit while working at a supermarket.

Below you will find any projects that I have made and i am currently making, that showcase my skills and general background in fullstack development

Experience

Notion Clone • (80% completed) • [open](#)

The project is based on www.notion.so. It was built using Next.js, with Tailwind CSS and Radix UI utilized to create a stylish and flexible design following shadcn. This website integrates with MongoDB and Prisma to handle data, while Cloudinary takes care of images. To maintain a consistent look, Next-theme was integrated and For secure access, Clerk's authentication was implemented. This project follows the principle of type safety.

AirBnb Clone • [open](#)

The project based on www.airbnb.com. It was built using Next.js and utilizing Tailwind CSS along with a few React component libraries. The project utilizes MongoDB for storing user data upon registration, employs next-auth for authentication, and utilizes Cloudinary for image hosting.

Reddit Clone • [open](#)

The project that have similar functionality with reddit. I followed a YouTube tutorial with some minor edits. The project is built using Next.js, Tailwind CSS, and Radix UI following Shadcn. Additionally with integrated Editor.js to handle JSON data. The project utilizes PlanetScale and prisma for storing user data upon registration, utilizes clerk for authentication, and Uploadthing for image hosting, while streaming data is managed through Upstash redis. This project follow typesafety principle

Education

(2021) High School Diploma

SMKN 4 Pekanbaru, Indonesia.

Majoring in Computer Network Engineering.
